

**MATH**

# Introduction

**This collection of 15 math activities provides teacher versions with answers and notes. Student versions are edited and answers omitted. Teachers can download the activities and begin each activity with a minimum of work (I hope!), only needing to gather the necessary equipment.**

**These 15 activities are some of my favorite. You best determine grade levels and subject appropriateness. With modifications, many of the activities can be used K – 12.**

**Nancy Mathras, the author, has been teaching mathematics since 1969. She has taught grades 7 – 12 and likes to vary her teaching assignments. With a BS in mathematics, a M.Ed. with math concentration, plus 30 hours of advanced coursework, she continues to learn mathematics. Serving as Mathletes advisor and as a professional development presenter and working with her school's committees helps her pinpoint topics in math that need to be better explored. She welcomes your comments, critiques, suggestions, and questions. You can reach her at [nmathras@charter.net](mailto:nmathras@charter.net).**
